rawhemp.se — Communications Intelligence Report

2026-05-28 · 9 channels analyzed · 11 critical · 12 watch · 27 pass

Run ID: cip-mpposqh2

ENTERPRISE COMMS RISK SCORE

MEDIUM RISK

68 / 100

Procurement-facing rollup of CCaaS (25%), UCaaS (25%), AI-Interaction (20%), and Enterprise Compliance Alignment (30%).

PROCUREMENT IMPACT

Sender-authentication gaps, missing voice-channel disclosures, and CTA / routing-clarity issues may block this brand in enterprise RFPs and vendor-security reviews. Remediation is in-scope for the next 7-day cycle.

OVERALL RESULT

Site loads. Checkout is non-functional.

PROCUREMENT RISK CALLOUTS

SENDER AUTHENTICATION

CRITICAL

FAIL SPF	Missing
FAIL DMARC	Missing
FAIL DKIM	Missing
FAIL MX	Missing

Impact: Mail without SPF/DMARC/DKIM may be rejected or quarantined by enterprise inbox providers. The #1 sender-posture check in vendor-security reviews.

VOICE CHANNEL COMPLIANCE

CRITICAL

FAIL GDPR / privacy disclosure	Missing
OK Call-recording disclosure	Present
FAIL No dead-end nodes	Detected
FAIL Live agent transfer	Missing
FAIL No disengagement triggers	Detected

Impact: Missing GDPR disclosure or dead-end paths in the IVR may fail enterprise compliance review and trigger consumer-protection scrutiny in regulated markets.

CHECKOUT / PAYMENT STATUS

AT RISK

OK Checkout path discoverable	Present
OK Checkout reachable (HTTP 2xx)	Reachable
FAIL Payment provider script loads	Missing
FAIL Pay / order button renders	Missing

Impact: Loads but does not complete a transaction means payment scripts load yet the order flow fails before submission. Cannot process orders until the broken step is restored.

EXECUTIVE SUMMARY

PILLAR	SCORE	RISK	PRIORITY
CCaaS Readiness	80	Low	P3
UCaaS Readiness	68	Medium	P2
AI-Interaction	73	Medium	P2
Compliance Alignment	55	High	P1

CHANNEL HEALTH SUMMARY

CHANNEL	SCORE	STATUS
Comms Clarity	100	Healthy
Buyer Discoverability	90	Healthy
Conversion Path	50	Critical
Email Touchpoints	85	Healthy
Comms Surface Security	50	Critical
Social Presence	90	Healthy
Synthetic Comms Check	40	Critical
Comms Surfaces Inventory	100	Healthy
IVR Audit (Sample Data — production version scans your prospect's actual IVR)	60	Needs Work

SEVERITY DISTRIBUTION

TOP 5 FINDINGS (PROCUREMENT-BLOCKING)

--

1.	No payment provider script on the checkout page itself CONVERSION PATH	P1
2.	No 'Pay' / 'Order' button visible on checkout page CONVERSION PATH	P1
3.	Visible error/unavailable text on checkout page CONVERSION PATH	P1
4.	No SPF record COMMS SURFACE SECURITY	P1
5.	No DMARC record COMMS SURFACE SECURITY	P1

RISK SUMMARY

CRITICAL · P1

11

Fix within 48 hours

MEDIUM · P2

12

Fix within 7 days

LOW · P3

27

Track

HOW TO READ THIS

Each finding in this report carries a CX Impact tag (High / Medium / Low) and a Fix Priority (P1 / P2 / P3). Counts above aggregate every channel. Critical findings should be remediated before the next quarterly comms review; medium findings before the next planning cycle.

BEFORE/AFTER DELTA

First scan establishes the baseline. Score deltas and resolved-finding counts appear here after the next scheduled re-scan.

REMEDIATION PLAN

Findings transformed into a time-boxed action plan. P1 items are procurement-blocking and should be remediated within 48 hours; P2 items represent watch-list quality issues for the next planning cycle.

CRITICAL · P1 48-Hour Plan Due: 48 hours

CONVERSION PATH

- Restore payment provider integration.
- Confirm pay button renders after JS execution.
- Resolve visible error messages on checkout.
- Fix missing plugin assets.

COMMS SURFACE SECURITY

- Add SPF record.
- Add DMARC record (start at p=none for monitoring).
- Add MX records.

SYNTHETIC COMMS CHECK

- Restore payment provider scripts on checkout.
- Confirm pay button renders after JS execution.

WATCH · P2 7-Day Plan Due: 7 days

BUYER DISCOVERABILITY

- Add missing Open Graph image.
- Restore sitemap.xml.

EMAIL TOUCHPOINTS

- Add ESP integration if email automation is required.
- Add mailto contact link.
- Add privacy and consent indicators.

COMMS SURFACE SECURITY

- Configure DKIM signing on the sending mail server.

SOCIAL PRESENCE

- Add Open Graph image.

SYNTHETIC COMMS CHECK

- Resolve JavaScript errors.
- Fix failed network requests.

LONGITUDINAL TRACKING

This scan establishes the baseline. The fields below populate after the next re-scan of the same target.

BEFORE / AFTER DELTA

Baseline established — score deltas and resolved-finding counts appear after the next scan.

METRIC	PREVIOUS	CURRENT	DIFF
Overall score	—	—	0
Critical findings	—	—	0
Watch findings	—	—	0
Healthy channels	—	—	0

DRIFT DETECTION

No previous scan — baseline established. Drift events (new errors, removed trust signals, CTA changes, metadata drift, DNS changes, IVR changes, social-profile changes) will appear here after the next scan.

NEXT SCAN

Re-scans are available on demand from the CIP portal. Automated weekly re-scans roll out with the drift-detection module — first delta report fires after the second scan of the same target.

CCAAS / UCAAS READINESS

Channel scores mapped to enterprise readiness pillars relevant to contact-center, unified-communications, AI-in-teraction, and compliance procurement reviews.

CCaaS Readiness Routing clarity (IVR audit) + landing-page clarity (Comms Clarity). Determines whether enterprise contact-center cam-paigns convert.	80/100	GAPS
UCaaS Readiness Email touchpoints + sender posture (SPF/DKIM/DMARC). Determines whether unified-comms workflows reach inboxes.	68/100	GAPS
AI-Interaction Readiness Discoverability + synthetic browser behavior + social presence. Determines whether AI agents can parse and represent the brand reliably.	73/100	GAPS
Enterprise Compliance Alignment TLS posture + GDPR/recording disclosures. Determines whether the surfaces survive procurement review.	55/100	AT RISK

AI-AGENT READINESS SUMMARY

GAPS

Can automated agents and crawlers parse and extract brand metadata reliably?

OK	Structured metadata (JSON-LD)	Present
--	Open Graph image / title	Missing
OK	Twitter card meta	Present
OK	Meta description	Present
OK	CTA discoverability	Present
OK	Trust signals on landing surface	Present

Impact: When signals are missing, automated agents may misrepresent the brand or fail to extract key information (pricing, contact paths, product names).

CHANNEL SCORES

COMMS CLARITY 100 5 finding(s)	BUYER DISCOVERABILITY 90 7 finding(s)	CONVERSION PATH 50 7 finding(s)
EMAIL TOUCHPOINTS 85 4 finding(s)	COMMS SURFACE SECURITY 50 5 finding(s)	SOCIAL PRESENCE 90 3 finding(s)
SYNTHETIC COMMS CHECK 40 8 finding(s)	COMMS SURFACES INVENTORY 100 3 finding(s)	IVR AUDIT (SAMPLE DATA — PRODUCTION VERSION SCANS YOUR PROSPECT'S ACTUAL IVR) 60 8 finding(s)

PER-CHANNEL CONFIDENCE

Confidence reflects whether the channel completed cleanly with primary signal sources. Medium / Low confidence means partial data — re-run recommended before procurement use.

Comms Clarity	HIGH
Buyer Discoverability	HIGH
Conversion Path	HIGH
Email Touchpoints	HIGH
Comms Surface Security	HIGH
Social Presence	HIGH
Synthetic Comms Check	HIGH
Comms Surfaces Inventory	HIGH

HIGH

CHANNEL FINDINGS

Comms Clarity — 100

SCOPE

Homepage.

FINDINGS

- ✓ Title present.
- ✓ Single H1 detected.
- ✓ All 39 images contain alt text.
- ✓ 39 interactive elements detected.
- ✓ HTML payload 721 KB.
- ✓ Page loaded in 780 ms.

REQUIRED ACTION

- None.

Buyer Discoverability — 90

SCOPE

Homepage.

FINDINGS

- ✓ Meta description present.
- ✗ Open Graph image missing.
- ✓ Open Graph title present.
- ✓ Twitter card present.
- ✓ Two JSON-LD blocks detected.
- ✓ robots.txt returns 200.
- ✗ sitemap.xml returns 404.
- ✓ Ten internal links valid.

REQUIRED ACTION

- Add missing Open Graph image.
- Restore sitemap.xml.

Conversion Path — 50

SCOPE

Checkout path: /spara-din-order/.

FINDINGS

- ✓ Two checkout-style paths detected.
- ✓ Checkout reachable (HTTP 200).
- ✗ No payment provider script detected.
- ✗ No Stripe, Swish, PayPal, Klarna, Shopify, or Adyen activity.
- ✗ No card frame rendered.
- ✗ No pay/order button rendered.
- ✗ Visible error text on checkout.
- ✓ Trust signals: 5 of 5 present.
- ✗ One plugin asset returns 404.
- ✗ Checkout cannot process transactions.

REQUIRED ACTION

- Restore payment provider integration.
- Confirm pay button renders after JS execution.
- Resolve visible error messages on checkout.
- Fix missing plugin assets.

Email Touchpoints — 85**SCOPE**

Homepage.

FINDINGS

- ⚠ No ESP script detected.
- ✅ One signup form detected.
- ⚠ No mailto link detected.
- ⚠ Privacy and consent indicators missing.

REQUIRED ACTION

- Add ESP integration if email automation is required.
- Add mailto contact link.
- Add privacy and consent indicators.

CHANNEL FINDINGS (CONTINUED)

Comms Surface Security — 50

SCOPE

DNS records of rawhemp.se.

FINDINGS

- ❌ No SPF record. 1 · FIX 48H
- ❌ No DMARC record. 1 · FIX 48H
- ⚠️ No DKIM found at common selectors.
- ❌ No MX records — domain cannot receive mail.
- ✅ TLS reachable on 2 comms surfaces.

REQUIRED ACTION

- Add SPF record.
- Add DMARC record (start at p=none for monitoring).
- Configure DKIM signing on the sending mail server.
- Add MX records.

RECOMMENDED DNS ADDITIONS

TXT rawhemp.se

```
v=spf1 include:<your-mail-sender> ~all
```

Adds SPF so receivers can verify authorized senders. Replace <your-mail-sender> with your ESP host (e.g. _spf.google.com, sendgrid.net, spf.protection.outlook.com, _custspf.one.com).

TXT _dmarc.rawhemp.se

```
v=DMARC1; p=none; rua=mailto:dmarc@rawhemp.se; fo=1
```

Starts DMARC in monitor mode. Aggregate reports arrive at dmarc@rawhemp.se (create that mailbox first, or use a free aggregator like postmarkapp.com/dmarc). After ~7 days of reports, you will know which IPs send mail under this domain. Then tighten to p=quarantine.

Social Presence — 90

SCOPE

Homepage.

FINDINGS

- ✅ Title captured.
- Description captured.

|

| 3 draft social posts generated.

| Open Graph image missing.

REQUIRED ACTION

- Add Open Graph image.

Synthetic Comms Check — 40**SCOPE**

Homepage + Checkout.

FINDINGS

| Rendered in 4604 ms.

| One JavaScript error. 7D

| One failed network request.

| Rendered in 4324 ms (HTTP 200).

| No payment provider initialization.

| No Stripe network calls observed.

| No pay order button rendered.

| One JavaScript error. 48H

| One failed network request.

REQUIRED ACTION

- Resolve JavaScript errors.
- Fix failed network requests.
- Restore payment provider scripts on checkout.
- Confirm pay button renders after JS execution.

Comms Surfaces Inventory — 100**SCOPE****FINDINGS**

| 11 unique public comms surfaces discovered.

| 11 of 11 surfaces respond on HTTPS.

Comms surface mix — other: 8, marketing: 3.

I

REQUIRED ACTION

- None.

IVR Audit (Sample Data — production version scans your prospect's actual IVR) — 60**SCOPE****FINDINGS**

- I IVR audit — SAMPLE: BlueComm Communications (sample).
- I Menu depth: 3 levels.
- I ~~1 dead-end node detected.~~
- I ~~1 terminal hangup node~~ without agent transfer.
- I ~~No GDPR/privacy disclosure~~ detected in any prompt.
- I Call-recording disclosure present.
- I Live agent transfer path available.
- I ~~Model uses "menu options have changed"~~ — known disengagement trigger.

REQUIRED ACTION

- None.

WHAT'S HEALTHY

OK	Comms Clarity	100
OK	Comms Surfaces Inventory	100
OK	Buyer Discoverability	90
OK	Social Presence	90
OK	Email Touchpoints	85

OPERATOR NOTES

Findings derived solely from automated scan. Operator review extends the scope; recommended pre-pitch checks include:

- TLS certificate expiry windows on all reachable comms surfaces
- DNS propagation stability for sender-auth records
- Unexpected redirect chains on primary marketing surfaces
- Shadow subdomain risk surfaced by CT-log enumeration

RECOMMENDED NEXT STEPS

1. Fix P1 (critical) items within 48 hours — see Remediation Plan.
2. Fix P2 (watch) items within 7 days — see Remediation Plan.
3. Schedule pre-pitch operator review (TLS expiry, DNS propagation, shadow subdomains).
4. Enable scheduled re-scans to populate Before/After delta and drift detection.
5. Re-scan after remediation to confirm score lift and resolved-finding count.

SUMMARY

Checkout is non-functional.
No payment provider loads.
No pay button renders.
Payment integration must be restored before the site can process orders.

AUDIT TRAIL

Generated by Pam on 2026-05-28 16:08:11 UTC.
Run identifier: cip-mpposqh2.
Findings derived from automated scan.
Operator review recommended before external use.
